

Drone

The Association for Unmanned Vehicle Systems International, projected more than 100,000 new jobs in unmanned aircraft by 2025.

The Deploy Drone Level III kit prepares young pilots for true success in flight. Working with safety and drone regulations, students will acquire the knowledge and appreciation needed to fly safely in and out of the classroom. This kit supports students in improving piloting skills while also exploring the science behind flight and drones. Allowing for research and hands-on application, the modules build into challenges and tasks to give plenty of flight time with support. The kit begins with students building a snap together drone then culminates by combining flight skill, science, and teamwork with fun competition.
