

# Mobile Development

Mobile devices have become ubiquitous. Two-thirds of the world's population are connected to a mobile device. That's more than 5 billion unique mobile subscribers. The mobile application industry is booming, with total revenues from mobile apps projected to reach \$99 billion by 2019.

Development Level III Kit will engage students in important aspects of the app design process. Students will be encouraged to plan for the creation of an app by exploring purpose, functionality, and design. They will build paper and digital prototypes, gain feedback from peers, and make changes to improve their designs before using App Lab by Code.org to create final versions of their apps. Students will also experience augmented reality (AR) and be given an opportunity to create an AR experience of their own.
